

# Project Description

Upgrade version 1.0 cuesheet application by adding more features to the graphical user interface and making better design choices.

2.

New Application Features

## New Application Features

### **FANCY DRAG**

Improved segment vertex dragging motion on the canvas

## IMPORT/EXPORT 2 FILE FORMATS

Users can import and export cue sheets with .csv and .txt files

## ADD/REMOVE/IMPORT MULTIPLE SEGMENTS

Users can import/add/remove multiple segments at once to the segment bank

## REMOVE MULTIPLE SEGMENTS

Remove a segment or segments from the overall route

### **EXPORT IN DIFFERENT FORMAT**

Add and remove segments from the overall route

### **UNDO**

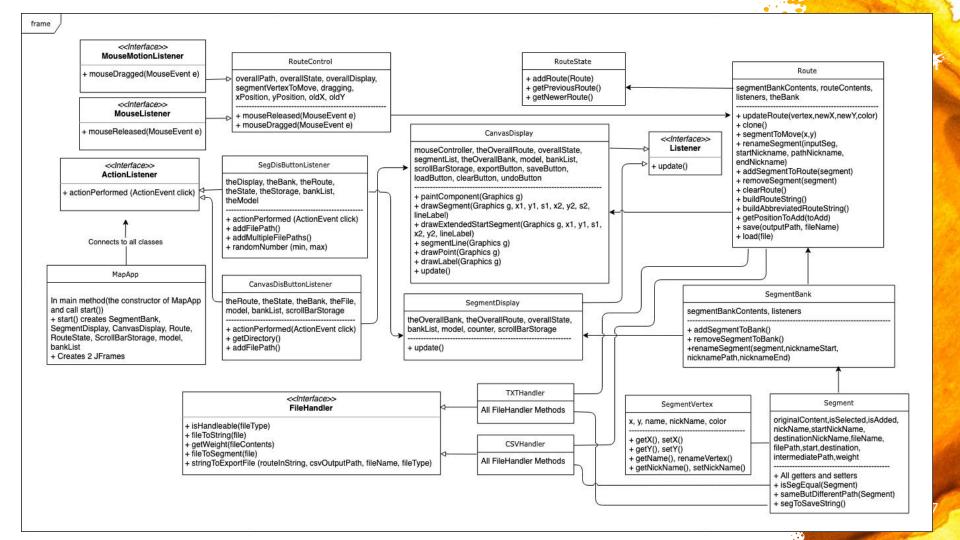

Undo users inputs/modifications with the overall route

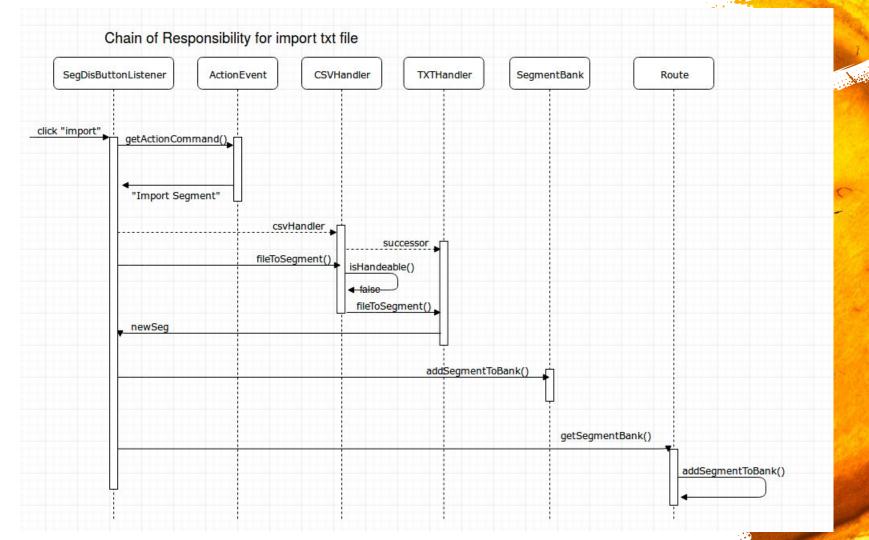

3.

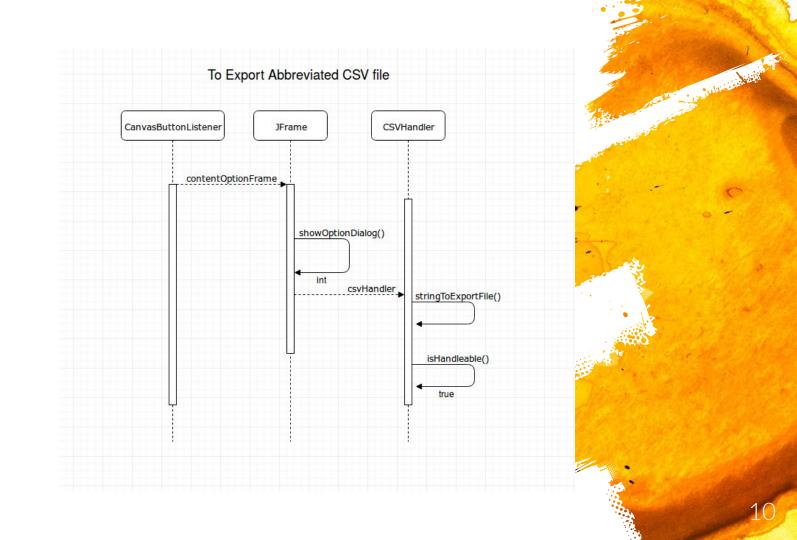

Class Diagram

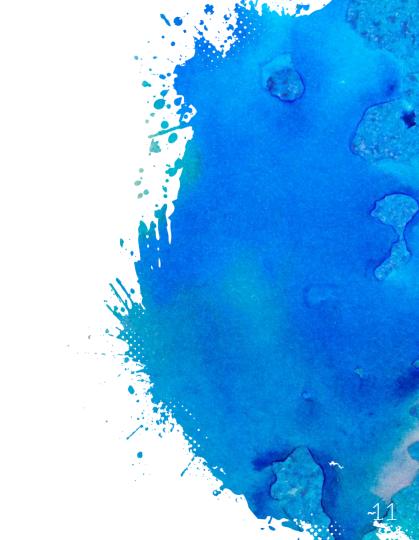

5. Testing

# Testing

## SegmentTest

- testSegmentGetters
- testSegmentSetters
- testSameButDifferentPath
- testCloneMethod

## RouteTest

- testAddSegmentInRoute
- testRemoveSegment
- testGetPositionToAdd
- testClearRoute
- testBuildRouteString

6.

Lessons Learned

## Lessons Learned

- × Get the correct version of the java compiler.
- × Undo/Redo was not as simple as anticipated
- × Effective use of git (i.e. merge conflicts)
- × Swing was still an ouch...

## Version 3.0 Features

#### Redo

Ability to redo all the actions toward the overall route.

## Editable Route Segment Contents

Fancier GUI by allowing users to edit the content of each segment of the overall route on the canvas.

#### Set Theme

Ability to set different themes for the canvas and the segment bank display

## On-the-canvas rename

Make GUI fancier by allowing users to rename start/end/intermediate parts of the route on the canvas.
